Sideline Club Seats not only provide some of the best sight lines in the stadium but they also feature a radiant heating system. The radiant heaters hang above the seating area in rows 6 to 15 and provide additional warmth during the cold winter months. Club Seat Members enjoy the outdoor atmosphere and excitement with the additional comfort of radiant heat. With indoor club facilities just steps away, it’s the best way to watch a game here at New Era Field.

“They were an excellent addition to the club seats. They give off the perfect amount of heat and comfort. I look forward to them during the cold Buffalo winters.”

“Big difference with addition of radiant heating system.”

“Love the heat!”

“I am in between two heating systems and I can still feel the heat. What a novel idea!”

“Nice move to improve comfort at game.”

“Installing the heating system was a clever way to comfort the fans in the cold weather. Glad to see personnel are taking initiative to aid in the fan experience.”

**RADIANT HEAT FACTS:**

- Just like the sun on cold winter days, radiant heaters will provide spectators with comfort.
- Radiant heat is clean and safe. There are no combustion fumes or water vapor produced.
- Radiant heaters convert electrical power into infrared radiant energy to heat people and objects for increased comfort or to prevent freezing conditions, without directly heating the surrounding air.
